

PID - Certificate

Showing your commitment to outstanding PID performance

PI-Berlin is issuing a PID certificate on demand for products and product lines from module manufacturers depending on PID test results at PI-Berlin for specific material combinations.

The PID certificate shows the commitment of the producer to exceptional quality control with an added focus to PID. To qualify for PID certification, PI-Berlin developed a list of requirements and set up a special test sequence for modules. If the module producer fulfills these requirements and completes the tests with a very good performance the certificate will be awarded.

The certificate then can be printed on the module, used in the product advertisement and for marketing purposes.

For manufacturers

- Show your dedication to outstanding PID performance
- Provide your distributors with a tool to mark your PV-modules
- Give your customers security with certified PID performance

For EPCs, distributors and PV customers:

- Secure long time performance (PID)
- Fast and easy check for PID performance of PV module with the certificate via PI listing
- Safety through independent PID control
