

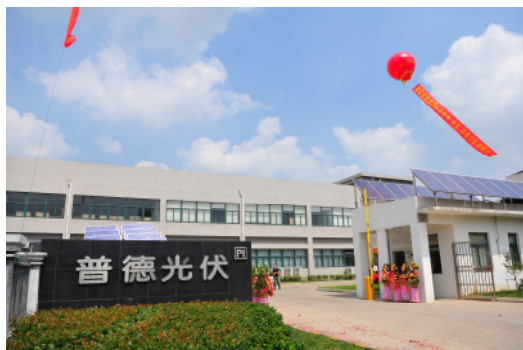

## Photovoltaik-Institut Berlin AG

### Quality Packages: On-Site-Service in China

The accredited PI Photovoltaic Institute Berlin AG also offers its proven quality packages directly in China (Suzhou-Shanghai). These packages are required mainly by financing banks to minimize the investigation risk.

PI China- Suzhou – Labor

Grand Opening PI-China, 31 August 2012

The PI herewith completes its range of services across the entire value chain from module to field operations: PI engineers audit the production process on the ground and pull, as independent experts, patterns directly from production or containers prior to shipment. These modules are tested either in Berlin or Suzhou by the PI quality packages.

Completed photovoltaic systems will be commissioned under the supervision of the PI EXPERTS GmbH and supported over the years by their monitoring. Any claims for existing installations can be clarified or corrected by the mobile use of the PI laboratory. Already in the planning phase, you can consult the PI-EXPERTS and achieve an optimised system layout.

In addition, the PI R & D team supports in the area of PV product design, production and field problems, e.g. induced in the potential degradation (PID).
